

# Landraces from different geographic origin are grouped together

Intensive exchange within country by human?

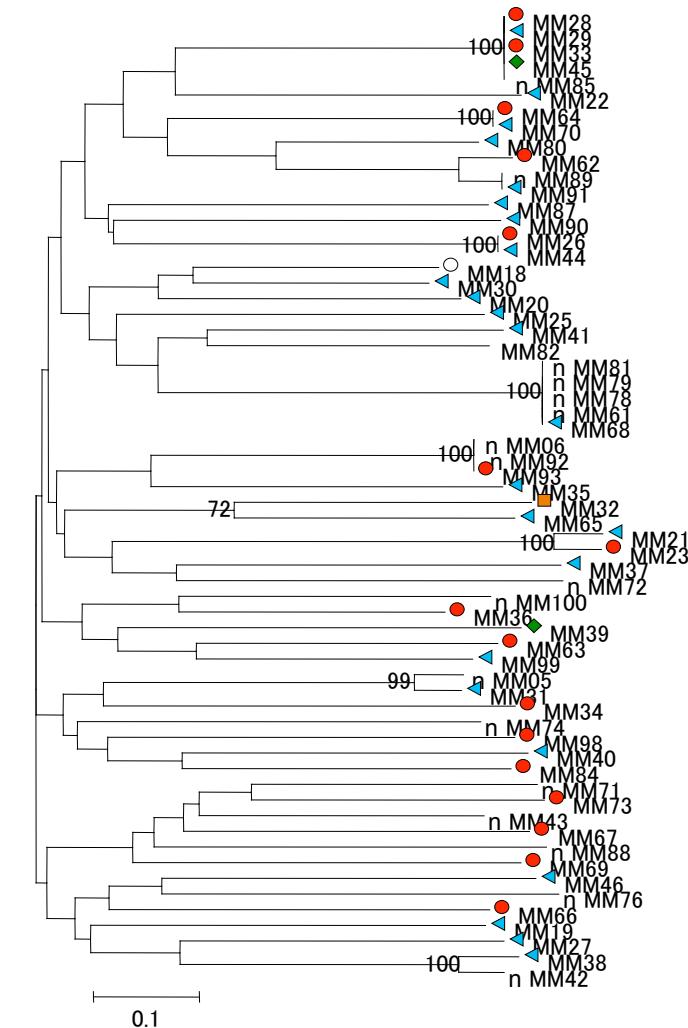

Fig. NJ tree of Myanmar accessions

## Conclusions

- High genetic heterozygosity
- Distribution on PCoA plot is as broad as Florida varieties
- Broad genetic background

**Highly diverse and worth to conserve**

- No clear correlation between geographical origin and genetic background

**Collect and conserve from broad geographic range**

# Genetic Integrity of Germplasm

Specific question:

What is the consequences of genetic Integrity of germplasm conserved in different genebanks ?

Genetic integrity of germplasm conserved in different genebanks

Photos: Courtesy of Dr. Kawase / NIAS Genebank

# Hypothesis:

## Genetic Diversity of the Germplasm Should be Genetically Equivalent

Differences in management are assumed

# Regeneration process in genebank management

Ideal: Use as many individual as possible

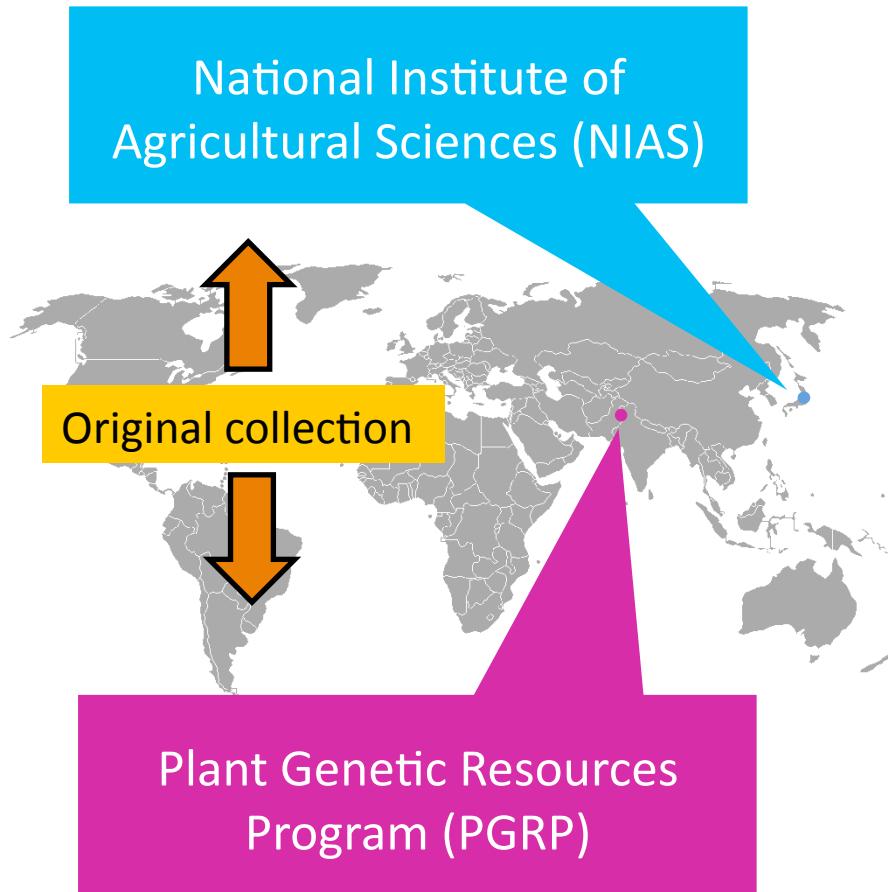

BUT → Cost for regeneration is the biggest constrain

Table Total and average cost of genebank (Horna, 2008)

| Activities          | Number of accessions | Total capital cost (\$/year) | Total quasi-fixed cost (\$/year) | Total labor costs (\$/year) | Total non-labor costs (\$/year) | Average capital cost (\$ /acc) | Average quasi-fixed cost (\$ /acc) | Average variable cost (\$ /acc) | Total AC (\$ /acc) |
|---------------------|----------------------|------------------------------|----------------------------------|-----------------------------|---------------------------------|--------------------------------|------------------------------------|---------------------------------|--------------------|
| Acquisition         | 4,95                 |                              |                                  |                             | 3,524.80                        |                                |                                    |                                 |                    |
| Characterization    | 2,00                 |                              |                                  |                             | 1,671.48                        |                                |                                    |                                 |                    |

# Results and Discussion

Table Basic information of NIAS and PGRP

|      | Location             | Regeneration Frequency | Field location | Geographic position of field (lat /long) | Growing season | Min. / max (°C) | No. of indiv. used for regeneration |
|------|----------------------|------------------------|----------------|--|----------------|-----------------|-------------------------------------|
| NIAS | Tsukuba, Japan       | 0 to 1 time.           | Sapporo        | 43.00 N / 141.40 E                       | Sep.-Jun.      | -6.7 / 22.3     | About 15                            |
|      |                      |                        | Iwate          | 39.73 N / 141.13 E                       | Sep.-Jun.      | -5.3 / 23.8     |                                     |
|      |                      |                        | Ibaraki        | 36.02 N / 140.10 E                       | Oct.-Jun.      | -2.7 / 24.9     |                                     |
|      |                      |                        | Fukuyama       | 34.50 N / 133.38 E                       | Oct.-Jun.      | 0.5 / 26.9      |                                     |
| PGRP | Islamabad , Pakistan | Once in 1998.          | Islamabad      | 33.70 N / 73.12 E                        | Nov.-Jun.      | 2.9 / 29.7      | Few                                 |

Environmental condition of regeneration field are different

Individuals for regeneration are different

# Variation within a genebank was greater than between different genebanks

Table Result of AMOVA

| Variation source | df | SS     | Variance component | % of variation |
|------------------|----|--------|--------------------|----------------|
| Among popl.      | 2  | 27.59  | 0.36               | 6              |
| Within popl.     | 48 | 251.88 | 5.25               | 94             |
| Total            | 50 | 274.47 | 5.61               | 100            |

Table Result of Chi square test

| # of Loci | P Chi-sq. | value P   |
|-----------|-----------|-----------|
| O vs P    | 2.40      | 0.12 (ns) |
| O vs N    | 2.02      | 0.16 (ns) |

# No significant differences of AFLP loci between different genebanks

Table Comparison of unchanged AFLP Loci between Original vs NIAS and Original vs PGRP

| NIAS      |  | 1-1 matches |      |          |      | 0-0 matches |      |          |       | # of Sub |
