Table 3. List of descritors for maize

| Descriptor number | Descriptor | Descriptor state | Recording stage | Remarks |
| :---: | :---: | :---: | :---: | :---: |
| 1 | Accession number |  |  |  |
| 2 | Total no. of leaves | Record the total number of leaves per plant | At flowering |  |
| 3 | Leaf length (cm) | From ligule to apex. Measure the leaf which subtends the uppermost ear | At flowering |  |
| 4 | Leaf width (cm) | Mid-way along its length. Measure the leaf which subtends the uppermost ear | At flowering |  |
| 5 | Leaf venation index | Divide the number of veins midway along the ear leaf by the leaf width | At flowering |  |
| 6 | Leaf orientation | 1 Erect | After flowering |  |
|  |  | 2 Pendant |  |  |
| 7 | Presence of leaf ligule | + Present | After flowering |  |
|  |  | 0 Absent |  |  |
| 8 | Days to ear leaf senescence | Number of days from sowing to when $50 \%$ of the plants have a dry ear leaf | At maturity |  |
| 9 | Days to silking (female flowering) | Number of days from sowing to when silks have emerged on $50 \%$ of the plants | At flowering |  |
| 10 | Days to tasseling | Number of days from sowing to when $50 \%$ of the plants have shed pollen | At flowering |  |
| 11 | Tassel type | 1 Primary branches | At milk stage |  |
|  |  | 2 Primary-secondary branches |  |  |
|  |  | 3 Primary-secondary-tertiary branches |  |  |
| 12 | Tassel length (cm) |  | After milk stage |  |
| 13 | Tassel peduncle length (cm) |  | After milk stage |  |
| 14 | Tassel branching space (cm) | Distance between the first and last primary branches | After milk stage |  |
| 15 | Number of primary branches on tassel |  | After milk stage |  |
| 16 | Number of secondary branches on tassel |  | After milk stage |  |
| 17 | Number of tertiary branches on tassel |  | After milk stage |  |
| 18 | Tassel size | 3 Small | After milk stage |  |
|  |  | 5 Medium |  |  |
|  |  | 7 Large |  |  |
| 19 | Plant height (cm) | From ground level to the base of tassel | After milk stage |  |
| 20 | Ear height (cm) | From ground level to the node bearing the uppermost ear | After milk stage |  |
| 21 | Foliage | Rating of total leaf surface | After milk stage |  |
|  |  | 3 Small |  |  |
|  |  | 5 Intermediate |  |  |

|  |  | 7 Large |  |  |
| :---: | :---: | :---: | :---: | :---: |
| 22 | Growing Degree Units to female flowering | Emergence in 50\% of the plants | At flowering |  |
| 23 | Growing Degree Units to male flowering | when $50 \%$ of the plants have flowered | At flowering |  |
| 24 | Stay green | 3 Low | At maturity |  |
|  |  | 5 Medium |  |  |
|  |  | 7 High |  |  |
| 25 | Number of leaves above the uppermost ear including ear |  | At milk stage |  |
| 26 | Tillering index | Number of tillers per plant | At flowering |  |
| 27 | Stem colour | Indicate up to three stem colours in the order of frequency, noted between the | At flowering |  |
|  |  | 1 Green |  |  |
|  |  | 2 Sun red |  |  |
|  |  | 3 Red |  |  |
|  |  | 4 Purple |  |  |
|  |  | 5 Brown |  |  |
| 28 | Root lodging | Percentage of plants root- | At maturity |  |
| 29 | Stalk lodging | Percentage of plants root- | At maturity |  |
| 30 | Sheath pubescence | 3 Sparse | At flowering |  |
|  |  | 5 Intermediate |  |  |
|  |  | 7 Dense |  |  |
| 31 | Prolificacy index | Divide the total ear number by the total (ca 20) plants | At maturity |  |
| 32 | Ear length (cm) |  | At harvest |  |
| 33 | Peduncle length (cm) |  | At harvest |  |
| 34 | Ear diameter (cm) | Noted at central part of the uppermost ear | At harvest |  |
| 35 | Cob diameter (cm) | Noted at central part of the uppermost ear | At harvest |  |
| 36 | Rachis diameter (cm) | Noted at central part of the uppermost ear | At harvest |  |
| 37 | Number of bracts |  | At harvest |  |
| 38 | Husk cover | 3 Poor | At harvest |  |
|  |  | 5 Intermediate |  |  |
|  |  | 7 Good |  |  |
| 39 | Ear damage | Amount of ear damage caused by ear rot and/or insect, etc | At harvest |  |
|  |  | 0 None |  |  |
|  |  | 3 Little |  |  |
|  |  | 7 Severe |  |  |
| 40 | Number of kernels per row |  | At harvest |  |
| 41 | Kernel row arrangement | Use the uppermost ear | At harvest |  |
|  |  | 1 Regular |  |  |
|  |  | 2 Irregular |  |  |
|  |  | 3 Straight |  |  |
|  |  | 4 Spiral |  |  |
| 42 | Cob colour | 1 White | At harvest |  |
|  |  | 2 Red |  |  |
|  |  | 3 Brown |  |  |

|  |  | 4 Purple |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | 5 Variegated |  |  |
|  |  | 6 Other (specify) |  |  |
| 43 | Shape of uppermost ear | 1 Cylindrical | At harvest |  |
|  |  | 2 Cylindrical-conical |  |  |
|  |  | 3 Conical |  |  |
|  |  | 4 Round |  |  |
| 44 | Grain shedding (\%) |  | At harvest |  |
| 45 | Number of kernel rows | Count number of kernel rows in central part of the uppermost | At harvest |  |
| 46 | Kernel type | Indicate up to three kernel types in the order of frequency | At harvest |  |
|  |  | 1 Floury |  |  |
|  |  | 2 Semi-floury (morocho), with an external layer of hard |  |  |
|  |  | 3 Dent |  |  |
|  |  | 4 Semi-dent, intermediate between dent and flint but close |  |  |
|  |  | 5 Semi-flint, flint with a soft |  |  |
|  |  | 6 Flint |  |  |
|  |  | 7 Pop |  |  |
|  |  | 8 Sweet |  |  |
|  |  | 9 Opaque 2/QPM |  |  |
|  |  | 10 Tunicate |  |  |
|  |  | 11 Waxy |  |  |
| 47 | Kernel colour | Indicate up to three kernel types in the order of frequency | In laboratory |  |
|  |  | 1 White |  |  |
|  |  | 2 Yellow |  |  |
|  |  | 3 Purple |  |  |
|  |  | 4 Variegated |  |  |
|  |  | 5 Brown |  |  |
|  |  | 6 Orange |  |  |
|  |  | 7 Mottled |  |  |
|  |  | 8 White cap |  |  |
|  |  | 9 Red |  |  |
| 48 | 1000-kernal weight (g) | Adjusted to 10\% kernel moisture content | In laboratory |  |
| 49 | Kernel length (mm) | Average of 10 consecutive kernels from one row in the middle of the uppermost ear, measured with a calliper | In laboratory |  |
| 50 | Kernel width (mm) | Average of 10 consecutive kernels from one row in the middle of the uppermost ear, measured with a calliper | In laboratory |  |
| 51 | Kernel thickness (mm) | Average of 10 consecutive kernels from one row in the middle of the uppermost ear, measured with a calliper | In laboratory |  |
| 52 | Shape of upper surface of kernel | 1 Shrunken | In laboratory |  |
|  |  | 2 Indented |  |  |

|  |  | 3 Level |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | 4 Rounded |  |  |
|  |  | 5 Pointed |  |  |
|  |  | 6 Strongly pointed |  |  |
| 53 | Pericarp colour | 1 Colourless | In laboratory |  |
|  |  | 2 Greyish white |  |  |
|  |  | 3 Red |  |  |
|  |  | 4 Brown |  |  |
|  |  | 5 Other (specify) |  |  |
| 54 | Aleurone colour | 1 Colourless | In laboratory |  |
|  |  | 2 Bronze |  |  |
|  |  | 3 Red |  |  |
|  |  | 4 Purple |  |  |
|  |  | 5 Other (specify) |  |  |
| 55 | Endosperm colour | 1 White | In laboratory |  |
|  |  | 2 Cream |  |  |
|  |  | 3 Pale yellow |  |  |
|  |  | 4 Yellow |  |  |
|  |  | 5 Orange |  |  |
|  |  | 6 White cap |  |  |
| 56 | Diseases- Ear or stalk rot (Diplodia maydis, Gibberella zeae , Fusarium moniliforme) | Susceptibility score on 1-9 scale, where |  |  |
|  |  | 1 Very low |  |  |
|  |  | 3 Low |  |  |
|  |  | 5 Intermediate |  |  |
|  |  | 7 High |  |  |
|  |  | 9 Very high |  |  |
| 57 | Rust (Puccinia sorghi , Puccinia polysora) | Susceptibility score as for disease 'Ear or stalk rot' |  |  |
| 58 | Downey mildew <br> (Peronosclerospora sp., <br> Sclerophthora sp.) | Susceptibility score as for disease 'Ear or stalk rot' |  |  |
| 59 | Leaf blight <br> (Helminthosporium maydis, Helminthosporium | Susceptibility score as for disease 'Ear or stalk rot' |  |  |
| 60 | Smut (Ustilago maydis) | Susceptibility score as for disease 'Ear or stalk rot' |  |  |
| 61 | Corn stunt (Corn stunt spiroplasma, CSS) | Susceptibility score as for disease 'Ear or stalk rot' |  |  |
| 62 | Maize bushy stunt (Maize bushy stunt mycoplasma, MBSD) | Susceptibility score as for disease 'Ear or stalk rot' |  |  |
| 63 | $\begin{array}{\|l} \hline \text { Insects - Borer (Busseola } \\ \text { sp., Chilo sp., Diatrea sp., } \\ \text { Ostrinia sp., Sesamia sp.) } \\ \hline \end{array}$ | Susceptibility score as for disease 'Ear or stalk rot' |  |  |
| 64 | Ear worm (Heliothis zea, Heliothis armigera ) | Susceptibility score as for disease 'Ear or stalk rot' |  |  |
| 65 | Root worm (Diabrotica sp.) | Susceptibility score as for disease 'Ear or stalk rot' |  |  |
| 66 | Abiotic stresses- Low temperature | Susceptibility score as for disease 'Ear or stalk rot' |  |  |

| 67 | Frost | Susceptibility score as for disease 'Ear or stalk rot' |  |  |
| :---: | :---: | :---: | :---: | :---: |
| 68 | Aluminium toxicity | Susceptibility score as for disease 'Ear or stalk rot' |  |  |
| 69 | Low nitrogen | Susceptibility score as for disease 'Ear or stalk rot' |  |  |
| 70 | Drought | Susceptibility score as for disease 'Ear or stalk rot' |  |  |
| 71 | Fertility | number of plants pollinated |  | New trait added |
| 72 |  | number of plants harvested |  | New trait added |
| 73 | Field germination | number of plants germinated |  | New trait added |
| 74 | Adaptation | well adapted or not adpated |  | New trait added |
| 75 | Grain yield | plot yield in tonns per hectare, based on $13.5 \%$ grain moisture |  | New trait added |
| 76 | Seed moisture | seed moisture at harvest |  | New trait added |
| 77 | Agronomic scale | Rating scale of 1-5: 1 is good and 5 is poor |  | New trait added |
| 78 | Race class | 1 Primary |  | New trait |
|  |  | 2 Secondary |  |  |
|  |  | (Maize race name, local name) |  |  |
| 79 | Leaf angle | 1 Small | At flowering | New trait added |
|  |  | 2 Wide |  |  |
| 80 | Attitude of leaf blade | 1 Straight | At flowering | New trait added |
|  |  | 2 Droopy |  |  |
| 81 | Anthocyanin colouration of leaf sheath | 0 Absent | At flowering | New trait added |
|  |  | 1 Present |  |  |
| 82 | Anthocyanin colouration at base of glume | 0 Absent | Anthesis halfway | New trait added |
|  |  | 1 Present |  |  |
| 83 | Anthocyanin colouration of glumes excluding base | 0 Absent | Anthesis halfway | New trait added |
|  |  | 1 Present |  |  |
| 84 | Anthocyanin colouration of anthers | 0 Absent | Anthesis halfway | New trait added |
|  |  | 1 Present |  |  |
| 85 | Density of spikelets | 0 Sparse | Anthesis halfway | New trait added |
|  |  | 1 Dense |  |  |
| 86 | Angle between main axis and lateral branches | 1 Narrow | Anthesis halfway | New trait added |
|  |  | 2 Wide |  |  |
| 87 | Attitude of lateral branches | 1 Straight | Anthesis halfway | New trait added |
|  |  | 2 Curved |  |  |
|  |  | 3 Strongly curved |  |  |

| 88 | Silk pigmentation | 0 Absent | At flowering | New trait added |
| :---: | :---: | :---: | :---: | :---: |
|  |  | 1 present |  |  |
| 89 | Time of silk emergence | 1 Very early |  | New trait added |
|  |  | 2 Early |  |  |
|  |  | 3 Medium |  |  |
|  |  | 4 Late |  |  |
| 90 | Anthocyanin colouration of glumes of cob | 0 Absent | At maturity | New trait added |
|  |  | 2 Present |  |  |
| 91 | Cob placement | 1 Low (<50\% of plant height) | At floweing | New trait added |
|  |  | 2 Medium (50\% of plant |  |  |
|  |  | 3 High (>50\% of plant height) |  |  |

Note: Descriptor number 71-91 are new and 71-78 are important for regeneration.
