

The **International Plant Genetic Resources Institute (IPGRI)** is an independent international scientific organization that seeks to advance the conservation and use of plant genetic diversity for the well-being of present and future generations. It is one of 16 Future Harvest Centres supported by the Consultative Group on International Agricultural Research (CGIAR), an association of public and private members who support efforts to mobilize cutting-edge science to reduce hunger and poverty, improve human nutrition and health, and protect the environment. IPGRI has its headquarters in Maccarese, near Rome, Italy, with offices in more than 20 other countries worldwide. The Institute operates through three programmes: (1) the Plant Genetic Resources Programme, (2) the CGIAR Genetic Resources Support Programme and (3) the International Network for the Improvement of Banana and Plantain (INIBAP).

Financial support for IPGRI's research is provided by more than 150 donors, including governments, private foundations and international organizations. For details of donors and research activities please see IPGRI's Annual Reports, which are available in printed form on request from ipgri-publications@cgiar.org or from IPGRI's Web site (www.ipgri.cgiar.org).

The **Institute for Genomic Diversity (IGD)** is located at Cornell University in Ithaca, New York, USA. IGD's mission is to develop, transfer, and provide technologies and educational resources to solve problems affecting the conservation of biodiversity and global food security. Specifically, its goals are: to utilize evolutionary and comparative genomics to solve applied problems; to develop and transfer enabling technologies in genomics and bioinformatics; to provide continuing support for national and international efforts in conservation, agriculture, and crop improvement; and to educate and train at all levels (including but not limited to undergraduate and graduate students, visiting scientists, faculty, teachers).

The geographical designations employed and the presentation of material in this publication do not imply the expression of any opinion whatsoever on the part of IPGRI, IGD or the CGIAR concerning the legal status of any country, territory, city or area or its authorities, or concerning the delimitation of its frontiers or boundaries. Similarly, the views expressed are those of the authors and do not necessarily reflect the views of these organizations.

Mention of a proprietary name does not constitute endorsement of the product and is given only for information.
